

BM-240 CMAX Push Broom with Side Arms 2.44m / 96"

Reference: BPT439

£2,178.00

BM-240 CMAX Push Broom with Side Arms 2.44m / 96" At 2.44m / 96" wide, the BM-150CMAX is a great sweeper for forklifts, telehandlers, tractors or skidsteers. Combining all the well-known features of the standard brushes, the C-Max Broom will hold bulk volume material and sweep close to a wall or curb without causing damage. The C-Max Broom 'Push broom with a twist' incorporates all the benefits of the unique push broom while providing you with a bulk volume mover. One day it will be working shifting large quantities of grain in a grain store, the next it can be clearing big volumes of slurry. What's different about the C-Max Broom is that it is a heavy-duty push broom with patented side retainers that hold bulk volumes of material in front of the brush, avoiding spillage at the sides. That in itself represents a major time-saving operation in addition to the fact that the brush is mounted to the host vehicle in minutes. There's no need to spend time going over swept areas to clear spill lines and the end brushes are also carefully twisted so they pull material away from a wall or curb, keeping it in the main path of the broom. No motor, belts or chains and no flying debris, the C-Max Broom is safe and maintenance free, with hard wearing brushes designed to sweep up to 450 miles before the bristles need changing. That's a lot of sweeping, tackling bulky materials with ease and offering a squeegee effect on wet surfaces too. The C-Max Broom is available in 1.5m, 1.8m and 2.4m widths and whilst it is ideal for livestock yards and grainstores it is equally as effective for a whole range of uses around the farm, in landscape maintenance, warehouse and distribution sites, snow clearance and much more. Optional extras Fork Sleeve Hitch - 4" / 100mm The FSH-400 hitch enables a Broom to be easily attached to a fork sleeve. Fork Sleeve Hitch for 6" / 150mm wide Forks The FSH-200-A hitch enables a forklift with 6" wide tines to connect easily to a push broom. Quick Hitch for Telehandler The SQH-200 Quick Hitch hitch enables a push broom to be easily attached to a telehandler, without the need for pallet forks. Price stated is for a JCB Quik hitch, however we stock quick hitches for various

manufactures. Please call the sales team for further information. 3 Point Hitch The TPH-200 hitch enables a push broom to be easily attached to a traditional category II 3-point hitch.
